Cyto Pulse Moves into New, Larger Facility

GLEN BURNIE, MD –To support its rapidly growing research and development operations and medical device production, Cyto Pulse Sciences, Inc., has completed a local move into a new, larger facility, the company announced today.

The 7,000 square foot headquarters includes, a larger biology research facility, expanded areas for device research and device production, and a “Clean Room” to produce devices for upcoming human trials.

The new facility is located in the Cromwell Business Park adjacent to BWI Airport.

“We just could not wait any longer due to the rapidly increasing revenue in all our product areas and research projects funded by SBIR grants through the National Institutes of Health (NIH),” said Richard Walters, Cyto Pulse CEO.

Cyto Pulse Sciences, Inc. is a medical device and treatment development company offering a line of medical equipment for laboratory research and clinical therapeutic applications. The company was founded in 1996 with the goal of developing clinical systems employing electric fields to create gene therapy and immunotherapeutic treatments unattainable by chemical or viral vectors. Its devices enable cellular material transfers and fusion with a degree of safety, repeatability and efficiency suitable for clinical use and laboratory research in gene therapy, immunotherapy, and hybridoma production.

Additional information on Cyto Pulse Sciences, Inc. is available at the company’s website, www.cytopulse.com.
