FOR IMMEDIATE RELEASE: January 14, 2007

### **Cyto Pulse Sciences, Inc. to Exhibit at the 2007 Cell & Gene Therapy Forum**

GLEN BURNIE, MD — Cyto Pulse Sciences, Inc., a leader in novel vaccine and gene therapy delivery solutions, will exhibit new product developments in Booth 17 at the Cell & Gene Therapy Forum 2007, at the Baltimore Marriott Waterfront Hotel, Baltimore, from January 22-24.

Cyto Pulse will present an extensive product pipeline covering the well established CEEF-50 hybridoma generation system for Monoclonal Antibody production, a new clinical evaluation system for intra-dermal DNA vaccine and gene therapy delivery, and a portable development stage epidermal DNA vaccine delivery system.

Cyto Pulse Sciences, Inc. is a medical device and treatment development company offering new innovative technology clinical therapeutic applications including delivery of DNA vaccines. The company was founded in 1996 with the goal of developing clinical systems employing electric fields to create gene therapy and immunotherapeutic treatments unattainable by chemical or viral vectors. Its devices enable cellular material transfers and fusion with a degree of safety, repeatability and efficiency suitable for clinical use and laboratory research in gene therapy, immunotherapy, and hybridoma production.

Additional information on Cyto Pulse Sciences, Inc. is available at the company's website, [www.cytopulse.com](http://www.cytopulse.com).
